# How we save trees

## All Rough Molded Fiber products:

- Use 100% pre- or post-consumer recycled newsprint
- Are made from 100% annually renewable resources
- Are processed chlorine free
- Are certified compostable and biodegradable

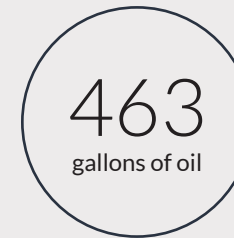

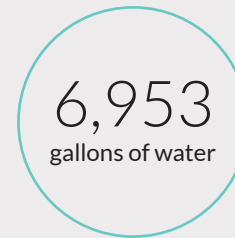

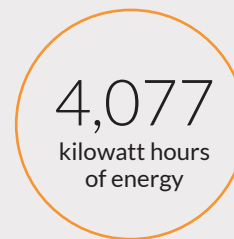

## All Chinet® Smooth Molded Fiber tableware products:

- Use 100% pre-consumer recycled milk carton stock
- Are made from 100% annually renewable resources
- Are certified compostable and biodegradable

After we separate the plastic coating from the milk carton stock (over 6,000 tons annually), we provide it to a company that produces a recycled wood substitute for the construction industry.

## Did you know?

Recycling 1 ton of paper saves\*:

Water-efficiency programs help the Chinet® brand save 600 million gallons of water. This equals the annual supply of a city of 6,000 people.

### Our water efficiency programs:

- Save millions of gallons of fresh water daily
- Conserve through re-use
- Convert effluent from acid to neutral pH

By using recycled materials rather than virgin wood pulp, we reduce air pollution by over 80 million pounds annually.

By implementing energy conservation programs, we save an additional 9 million kilowatt hours of electricity annually.

### The energy conservation program includes:

- Using efficient high-pressure sodium light fixtures
- Upgrades to the molded fiber drying process
